LARGE-SCALE ASSEMBLY

The assembly department of **NK TEHNOLOGIA** executes various types of works.

Beginning with planning in the design & engineering department all the way through to the start, every project is supervised by professionals with hands-on experience, which allows us to engage with projects of varying difficulty and reduce risks for the client during execution.

Our workers have immense experience in conducting works in harsh and dangerous environments, and that in turn allows us to properly evaluate the risks involved in most situations.
